Post-Freezing (Cryosurgery) Instructions

After treatment with liquid nitrogen the treated area may become red or sometimes a blister may form. Apply Vaseline or Aquaphor twice daily to the area. The area may be covered with a Band-Aid, but it is not necessary. If a blister forms, leave it intact and it will act as a natural bandage. If the blister comes off, apply an over the counter antibiotic cream, such as bacitracin twice daily and cover it with a Band-Aid until healed.
