MICRONEDDLING

JANUARY 09, 2017

Recently, I had a great micro-needling treatment by Dr. Gary Goldenberg at Mount Sinai Hospital located in the Upper East in New York City.

A micro-needling treatment is a minimally invasive cosmetic treatment that shrinks pores, helps improve acne scars, reverses sun damage and reverses aging from sun exposure. To start the treatment off, I was numbed for 20 minutes. Then, I washed the numbing cream off my face. Next, Dr. Goldenberg started the treatment with the Eclipse pen on 2.0 mm. This was a better result compared to a previous treatment I had done on 1.5mm. It has been four days since my treatment and my skin still looks red and is healing. After my treatment was finished, I applied a hyaluronic sheet mask to my face to help heal my skin.

In conclusion, this is a great, quick treatment, which provides the patient with nothing but amazing results. I highly recommend for you to schedule a micro needling treatment in the future.
